

## Elegance Fact Sheet

August 2009

**Elegance – The customized home elevator for every kind of lifestyle**

### Description

#### More than 6 million combinations to personalize your lift

Elegance home elevator offers a wider scope for customizing than any other lift for private use. From cab frame, doors, interior paneling and floors to lighting and accessories: each Elegance can be given its own unique configuration. For the interior a choice of materials is available such as metal, stone, wood or simply painted in the color of your choice, even the control panel can be matched to the overall design. Thus, the Elegance home elevator blends in seamlessly with any decor as an expression of your own style.

#### Safe and simple operation

The Elegance is operated by call buttons at the stops and a clearly laid out control panel in the cab. A hold to run control ensures safe and simple operation. Other features include an emergency phone and key-operated switches to protect against misuse.

#### Low-space installation

With a rise of up to 13.6 m and access possible from three sides, Elegance is ideally suited for home use. The TÜV and CE certified lift runs in a closed shaft, either in the building or built onto it, to give users a feeling of safety. A maximum 100 mm pit below the shaft accommodates all the hardware and keeps it out of sight, reducing space requirements for the Elegance to a minimum.
