## 1. Multirate Signal Processing

Introduction	1.1
Motivation I - Signal Reconstruction	1.2
Motivation II - Digital Downconversion	1.3
Motivation III - Subband Processing	1.4
Motivation IV - Increasing Resolution	1.5
Multirate Operations	1.6
Sampling Rate Conversion	1.7
Decimation	1.8
Decimation and the Frequency Domain	1.9
Downsampling	1.10
Expansion	1.11
Expansion and the Frequency domain	1.12
Interpolating an Expanded Signal	1.13
Resampling by a Rational Factor	1.14
Polyphase Techniques	1.15
Polyphase Downsampler	1.16
Polyphase Interpolation Filter	1.17
Polyphase Interpolator	1.18
Polyphase Filter Design	1.19
Advanced Resampling Techniques	1.20
Resampling Theory	1.21
Ideal Resampling	1.22
Sinc Reconstruction	1.23
Selective Reconstruction	1.24
Changing the Sampling Phase	1.25
Changing the Sampling Phase	1.26
Practical Considerations	1.27
Truncate and Introduce a Delay	1.28
Alternative "Prototype" Filters	1.29
Designing the Prototype Filter II	1.30
Example - Raised Cosine	1.31
Sampling Rate Conversion	1.32
Resampler Implementation	1.33
Polyphase Filter Banks I	1.34
Polynomial Approximation	1.35
Approximation Accuracy	1.36
Matrix Notation - Definitions	1.37
Implementation	1.38
Implementation Option I	1.39
Implementation Option II - Farrow Filter	1.40
Multirate DSP - Analysis	1.41
Multirate DSP - Reconstruction	1.42
Ideal Analysis Filter Bank	1.43
Ideal Synthesis Filter Bank	1.44
Subband Processing	1.45
Multiplexers and Demultiplexers	1.46
Non-Ideal Filters	1.47
Perfect Reconstruction / QMF Banks	1.48

Perfect Reconstruction / QMF Banks	1.49
M-Channel Filter Banks by Iteration	1.50
Modulated Filter Banks	1.51
Polyphase Implementation 1	1.52
Polyphase Implementation 2	1.53

## 2. Adaptive IIR and Subband

Introduction to Adaptive IIR Filters	2.1
Adaptive Filtering	2.2
Adaptive IIR Filter - Output Error	2.3
Adaptive IIR Filter Signal Flow Graph	2.4
System Identification of Recursive System	2.5
Minimising the MSE	2.6
The IIR "Wiener-Hopf"?	2.7
Multimodal Performance Surface	2.8
Gradient IIR Filtering Techniques	2.9
Full Gradient IIR LMS	2.10
Full Gradient IIR LMS....cont'd	2.11
Full Gradient IIR LMS SFG	2.12
Simplified Gradient IIR LMS	2.13
Simplified IIR LMS SFG	2.14
Feintuch's IIR LMS	2.15
Feintuch's Algorithms SFG	2.16
Feintuch's IIR LMS	2.17
Performance of IIR LMS Algorithms	2.18
Stability and Convergence	2.19
Newton/Recursive Predictor Error	2.20
Adaptive QR-IIR Filter	2.21
QR IIR SFG - Given's Rotations	2.22
QR-IIR Algorithm Properties	2.23
Adaptive IIR Filter - Equation Error	2.24
Equation Error LMS Algorithm	2.25
Equation Error Signal Flow Graph	2.26
Adaptive Equalisation	2.27
FF-DFE Decision Directed Mode (DDM)	2.28
Other Application Examples	2.29
Active Noise Control	2.30
Two Channel ANC System	2.31
Adaptive Differential PCM (ADPCM)	2.32
Adaptive IIR Conclusions	2.33
Adaptive Subband Processing	2.34
Acoustic Echo Cancellation	2.35
Subband Adaptive Filter (SAF) Structure	2.36
Advantages of SAF Approach	2.37
Critically Sampled Filter Banks	2.38
Complex Oversampled Filter Banks	2.39
Modulated Filter Banks	2.40
Polyphase Representation	2.41

# Contents:

CIC Bit Growth - Decimation	4.26	Recording and Reproduction	5.29
CIC Decimation Filter - Pruning LSBs	4.27	“Superaudio” - Cut out the Middlemen!	5.30
CIC Decimation Filter - Pruning LSBs	4.28	Direct DSP on one bit S-D Signals	5.31
CIC Decimation Filter - Pruning LSBs	4.29	QAM IF Downconversion	5.32
CIC Bit Growth - Interpolation	4.30	Bandpass Sigma Delta	5.33
The Sharpened CIC filter	4.31	Bandpass Sigma Delta to Baseband	5.34
The SCIC Filter Transfer Function	4.32	Bandpass and fs/4 Systems	5.35
SCIC Filter Passband	4.33	Mixed Signal DSP Processor	5.36
Alternative CIC Sharpening - ISOP filter	4.34		
ISOP Frequency Response	4.35		
ISOP compensated CIC filter	4.36		
Recursive & Non-recursive architectures	4.37		
Power, Area and Speed Comparison	4.38		
Power, Area and Speed Comparison	4.39		
Power, Area and Speed Comparison	4.40		
A non-recursive ‘SCIC’ filter	4.41		
Recursive & Non-recursive architectures	4.42		
Conclusions	4.43		

## 5. Oversampling & Sigma Delta

Introduction	5.1
Quantisation Error in a Signal	5.2
Quantisation Noise Correlation	5.3
Audio Dithering	5.4
Dithering: Time and Frequency View	5.5
Breaking the Quant. Error Correlation	5.6
Anti-alias for an Oversampling ADC	5.7
The Oversampling Concern.....	5.8
Practical Oversampling ADCs	5.9
Oversampling for DACs	5.10
Quantisation Noise Power	5.11
One Extra Bit Resolution	5.12
Extracting the “Extra Bit”	5.13
Single Bit ADC	5.14
Sigma-Delta Noise Shaping	5.15
Sigma-Delta Architecture	5.16
Linearised Models of Sigma Delta	5.17
Sig-Delta Discrete Model Architecture	5.18
Z-domain Representation	5.19
Sigma Delta Model Time Domain SFG	5.20
Time Domain Output	5.21
Sigma Delta ADC Decimation	5.22
Sigma Delta DAC Interpolation	5.23
Filter Stages for Decimation	5.24
$\Sigma-\Delta$ ADC and DAC Analog Components	5.25
Reconstruction Filter Requirements	5.26
Second Order Sigma Delta Structure	5.27
Multi-bit Sigma Delta Structure	5.28

## 6. DSP Case Studies

TI Processor Design Case Studies	6.1
Design Flow for TI C6211	6.2
Debug / Code Verification for TI C6211	6.3
Digital Demodulation Design	6.4
Recovery of an IF modulated Signal	6.5
Demodulation of Signal	6.6
Demodulation of Signal	6.7
But remember the Downsampling...!	6.8
Quadrature Modulate/Demodulate	6.9
Complex Signal Representations	6.10
Use of Complex Signals Example: QAM	6.11
QAM - Complex Representation	6.12
QAM - Fourier Representation	6.13
Channel and Demodulation	6.14
Band-pass Channel Model	6.15
Baseband Channel Model	6.16
Communications: Point to Point Link	6.17
Block Diagram: 16QAM System	6.18
16QAM System: Equalisation	6.19
Audio: Reverberation Example	6.20
Room Impulse Response	6.21
Impulse Response Generation	6.22
Reverberation Generation	6.23
Parametric Peaking Filter	6.24
Peaking Filter Design	6.25
Peaking Filter Flow Chart	6.26
